

IntelliSCREEN

Hypothetical Example for a Centralized Campus Solution

| Advantages | Disadvantages |
|--|---|
| Less IntelliSCREEN™ units are required requiring less overall upfront equipment cost | Lines or waiting for fever checks will be longer |
| | Equipment for scanning ID badges, barcodes on phone, and barcodes on labels will be needed in place of IntelliSCREEN™ Units |
| | Unable to provide fever checks on the entry of each building if ever required |

Units are connected to a centralized system either on private server or cloud server. Integration with building access system will be required for enabling ID badges after successful fever checks are completed on one of the centralized IntelliSCREEN units. The Rugged model is capable of operating outdoors without requiring an electrical hook-up.
